

John Muir Discovery Award Review

Name: Bella
Date: 31.03.16

Discover:

I discovered a lot of different places, where nature has made a mini den, and I love the blossoms that some spectacular trees produce. I discovered a place where tree roots have made a mini bug hotel using the passages from the roots. I did my hedgehog home under one of the trees with passageway roots.

Explore:

On the second lesson we had some time to

connect with nature whilst learning and having fun. I did some natural painting using natural materials. I also did some bug hunting and I found 2 millipedes!!!! 1 mummy and 1 baby.

Conserve:

On the third lesson we started our project, I thought that we should plant a tree to help the environment. My project didn't do too much damage to the environment (which is a very good thing!) I did my project with Charlotte, Owen, Jake, Alice, Adelaide, Alex and Harry. We made a home for hedgehogs. In year six we are going back to see how our project has survived.

Share:

I think that my group, the Spiky Shelters, actually work well together, especially that we never EVER have played together before. Now that we have done the John Muir award I think that I am now really good friends with Alice, Adelaide and Charlotte. My favourite things that I did in the John Muir award, was working as a team and producing a spectacular hedgehog home, as well as having an experience with sawing and other exciting things.

What I have learnt. . . .

I learnt that I work well with other people and that the wildlife is a VERY important thing in our lives. I have also learnt that you can make a really good team with people you normally don't like and don't play with.

My next steps. . . .

My next steps are to connect with nature a little bit more, and to communicate with people a lot better.
